Contents

Preface *xi*

PART I: ENGINEERING THERMODYNAMICS

Chapter 1 Introductory Concepts and Definitions **3–22**

1.1 Thermodynamics—Its Meaning and Applications 3
1.2 Thermodynamic System and Control Volume 4
1.3 Thermodynamic Properties, States, Processes and Cycles 6
1.4 Macroscopic and Microscopic Analysis 7
1.5 Homogeneous and Heterogeneous System 7
1.6 Thermodynamic Equilibrium 7
1.7 Quasi-static Process 8
1.8 Zeroth Law and Concept of Temperature 10
1.9 Units 11
1.10 Energy Interactions 11
1.11 $pd\forall$ Work or Displacement Work 13
1.12 $pd\forall$—Work in Various Quasi-static Process 15
1.13 Free Expansion 18
1.14 Heat Transfer 18
1.15 Specific Heat and Latent Heat 19
1.16 Comparison of Heat and Work 20

Solved Problems *20*
Exercises *22*

Chapter 2 First Law of Thermodynamics 23–46

2.1 Conservation of Energy and the First Law of Thermodynamics 23
2.2 Application of First Law to a Closed System Undergoing a Process 24
2.3 Energy—A Property of the System 25
2.4 Specific Heat at Constant Volume, Enthalpy and Specific Heat at Constant Pressure 26
2.5 Energy of an Isolated System 27
2.6 Perpetual Motion Machine of the First Kind (PMM-I) 27
2.7 First Law Applied to Flow Processes 28
2.8 The Steady-state, Steady-flow (SSSF) Process 30
2.9 The Unsteady-flow Process 31
2.10 The Uniform-state, Uniform-flow (USUF) Process 33
2.11 Applications of Steady-state Steady-flow Energy Equation 34
Solved Problems 35
Exercises 45

Chapter 3 The Second Law of Thermodynamics—Entropy and Availability 47–93

3.1 Introduction 47
3.2 Reservoir of Thermal Energy—Source and Sink 47
3.3 Second Law of Thermodynamics 48
3.4 Perpetual Motion Machine 51
3.5 The Reversible Process 51
3.6 The Carnot Cycle 51
3.7 The Reversed Carnot Cycle 52
3.8 Corollaries of the Second Law 52
3.9 Lost Work 63
3.10 Availability or Exergy 63
3.11 Two Useful Thermodynamic Relations 73
3.12 Entropy Change of an Ideal Gas 74
3.13 Isentropic Processes of Real Gases 75
3.14 Adiabatic Efficiency 76
3.15 Helmholtz Function and Gibbs Function 77
3.16 Property Diagrams 77
Solved Problems 80
Exercises 91

Chapter 4 Properties of a Pure Substance 94–107

4.1 Introduction 94
4.2 Phases of a Pure Substance 94
4.3 Phase Change Processes 95
4.4 Property Diagrams 96

4.5 Property Tables 99
4.6 Ideal Gases 102
Solved Problems 105
Exercises 107

Chapter 5 Gas Power Cycles 108–125

5.1 Introduction 108
5.2 The Carnot Cycle 108
5.3 The Stirling Cycle 109
5.4 The Ericsson Cycle 110
5.5 Air-Standard Cycles 111
5.6 The Otto Cycle 111
5.7 The Diesel Cycle 113
5.8 The Dual Cycle 115
5.9 Comparison of Otto, Diesel and Dual Cycles 116
5.10 The Brayton Cycle 118
Solved Problems 120
Exercises 124

Chapter 6 Vapour and Combined Power Cycles 126–158

6.1 Introduction 126
6.2 The Carnot Vapour Cycle 126
6.3 The Rankine Cycle 127
6.4 Methods to Increase the Rankine Cycle Efficiency 132
6.5 The Ideal Reheat Rankine Cycle 133
6.6 The Regenerative Cycle 135
6.7 Second-law Analysis of Vapour Power Cycles 140
6.8 Cogeneration 140
6.9 Binary Vapour Cycles 143
6.10 Gas–Vapour Combined Cycles 145
Solved Problems 147
Exercises 157

PART II: ENGINEERING FLUID MECHANICS

Chapter 7 Introduction to Fluid Mechanics 161–187

7.1 Introduction 161
7.2 Difference between Solid and Fluid 161
7.3 Differences between Incompressible and Compressible Flows 164
7.4 Concept of Continuum 165
7.5 Properties of Fluid 166
7.6 Viscosity 167

7.7 Causes of Viscosity 168
7.8 Non-Newtonian Fluids 169
7.9 Surface Tension 171
7.10 Wetting Properties of Fluid 174
7.11 Capillarity 174
7.12 Vapour Pressure 175
7.13 No-slip and No-temperature-jump Conditions 176
Solved Problems 176
Exercises 187

Chapter 8 Fluid Statics **188–228**

8.1 Types of Forces in Fluid 188
8.2 Pascal's Law of Hydrostatics 189
8.3 Fundamental Equation of Fluid Statics 190
8.4 Fluid with Variable Density 193
8.5 Temperature Lapse Rate 194
8.6 Scales of Pressure Measurement 195
8.7 Manometry 196
8.8 Hydrostatic Thrusts on Submerged Surfaces 201
8.9 Buoyancy 205
8.10 Stability of Submerged Bodies 206
8.11 Stability of Floating Bodies 206
Solved Problems 210
Exercises 228

Chapter 9 Kinematics of Fluid **229–277**

9.1 Introduction 229
9.2 Description of Fluid Flow 229
9.3 'Dimensions' of Flow 231
9.4 Steadiness and Uniformity of Flow 232
9.5 Acceleration in Fluid Flow 233
9.6 Streamlines, Pathlines and Streaklines 235
9.7 Conservation of Mass—The Continuity Equation 238
9.8 Continuity Equation—Integral Form 241
9.9 Average Velocity 243
9.10 Kinematics of a Fluid Element 243
9.11 Vorticity 246
9.12 Irrotational Flow 246
9.13 Stream Function 248
9.14 Relationship between Velocity Potential (ϕ) Stream Function (ψ) 250
9.15 Circulation 251
9.16 Free and Forced Vortex Flow 252
9.17 Source and Sink Flow 255

9.18 Doublet 257
9.19 Whirlpool 258
9.20 Superposition of Flows around a Cylinder with Circulation 258
Solved Problems 262
Exercises 277

Chapter 10 Dynamics of Fluid Flow 278–345

10.1 Introduction 278
10.2 The Reynolds Transport Theorem 278
10.3 Application of Reynolds Transport Theorem to Conservation of Mass, Momentum and Energy 282
10.4 Euler's Equation of Motion 284
10.5 Euler's Equation along a Streamline 286
10.6 Derivation of Euler's Equation—Control Volume Approach 287
10.7 Bernoulli's Equation—Derivation from the Euler's Equation 288
10.8 Forces on Confinements 292
10.9 Liquid in a Container Subjected to a Constant Linear Acceleration 294
10.10 Liquid in a Container Subjected to a Constant Rotation 296
10.11 Losses Due to Geometric Changes 298
10.12 Measurement of Flow in Pipes 303
10.13 Measurement of Velocity 315
10.14 Notches and Weirs 318
Solved Problems 322
Exercises 344

Chapter 11 Viscous Incompressible Flow 346–421

11.1 Equations of Motion 346
11.2 Constitutive Equations 347
11.3 Navier–Stoke's Equations 348
11.4 Significance of the Terms Related to Navier–Stokes Equations 352
11.5 Limiting Cases of the Navier–Stoke's Equations 353
11.6 Exact Solutions of Navier–Stokes Equations 354
11.7 Kinetic Energy and Momentum Correction Factors 362
11.8 Low Reynolds Number Flow around a Sphere (Stokes Law) 362
11.9 Hydrodynamic Boundary Layer 364
11.10 Development of Boundary Layer along a Flat Plate Held Parallel to Flow 365
11.11 Momentum-Integral Equation of Laminar Boundary Layer 372
11.12 The Separation of Boundary Layer 376
11.13 Control of Boundary Layer Separation 378
11.14 Mechanics of Boundary Layer Transition 381
11.15 Characteristics of Turbulent Flow 383
11.16 Reynolds Stresses and Eddy Viscosity 385
11.17 Prandtl's Mixing Length Hypothesis 387

11.18 Momentum Integral Equation of Turbulent Boundary Layer 389
11.19 Flow Over a Rough Plate 392
11.20 Drag and Lift 393
11.21 Classification of Drag 395
11.22 Streamlined and Bluff Bodies 397
11.23 Drag at Small Reynolds Number 398
11.24 Effects of Reynolds Number on Separation and Wake Formation 399
11.25 Elementary Aerofoil Theory 401
Solved Problems 405
Exercises 421

Chapter 12 Viscous Flow Through Pipes 422–458

12.1 Reynolds Experiment on Pipe Flow 422
12.2 Reynolds Number Regimes 424
12.3 Internal Versus External Viscous Flows 424
12.4 Laminar Flow in a Circular Pipe 426
12.5 Turbulent Flow in Pipes 431
12.6 Flow through Pipes in Series 435
12.7 Flow through Pipes in Parallel 438
12.8 Quasi-steady Flow in Pipes 439
12.9 Analysis of Flow in Pipe Networks (Hardy–Cross Method) 441
Solved Problems 443
Exercises 457

Chapter 13 Dimensional Analysis and Similitude 459–475

13.1 Introduction 459
13.2 The Principle of Dimensional Homogeneity 459
13.3 Fundamental Dimensions 459
13.4 Dimensional Analysis 460
13.5 Model Testing and Similitude 462
13.6 Similarity Conditions 462
13.7 Laws of Similarity 462
13.8 Forces and Force Ratios 464
13.9 Laws of Similitude 467
13.10 Distorted Models and Scale Effect 469
Solved Problems 469
Exercises 474

Chapter 14 Open Channel Flow 476–502

14.1 Introduction 476
14.2 Differences between Pipe Flow and Open Channel Flow 476
14.3 Types of Flow 478
14.4 Geometric Properties of Open Channels 480

14.5 Fundamental Equations 480
14.6 Laminar and Turbulent Flow 483
14.7 Uniform Flow and the Development of Friction Formulae 483
14.8 Hydraulically Efficient Channel Cross-section 486
14.9 Specific Energy 489
14.10 Hydraulic Jump 493
Solved Problems 495
Exercises 501

Chapter 15 Compressible Flow **503–542**

15.1 Introduction 503
15.2 Wave Propagation in Compressible Media 504
15.3 The Speed of Sound 505
15.4 Pressure Field Due to a Moving Source 510
15.5 Stagnation and Sonic Properties 512
15.6 Isentropic Flow in a Duct of Varying Area 513
15.7 Normal Shock Waves 522
15.8 Frictional Adiabatic Flow through Ducts (Fanno Line Flow) 527
15.9 Frictionless Adiabatic Flow through Ducts with Heat Transfer (Rayleigh Line Flows) 530
15.10 The Graphical Explanation of the Flow through a Normal Shock 532
15.11 Oblique Shock Waves 533
Solved Problems 536
Exercises 541

Multiple-Choice Questions ***543–556***

SUPPLEMENTARY READING

Basic Refrigeration Cycles ***559–566***

Appendix ***567–580***

Bibliography ***581–582***

Index ***583–587***
