Class 11 Maths
Chapter 32
Ex 32.1

Statistics Ex 32.1 Q1(i)

First arrange the given numbers in ascending order

write these numbers in ascending order

3011, 2780, 3020, 2354, 3541, 4150, 5000

we get 2354, 2780, 3011, 3020, 3541, 4150, 5000

Clearly, the middle number is median, 3020

Calculation of Mean Deviations

| x_i | $ d_i = x_i - 3020 $ |
|-------|----------------------------------|
| 3011 | 9 |
| 2780 | 240 |
| 3020 | 0 |
| 2354 | 666 |
| 3541 | 521 |
| 4150 | 1130 |
| 5000 | 1980 |
| Total | $d_i = \sum x_i - 3020 = 4546$ |

$$\text{M.D} = \frac{\sum d_i}{n} = \frac{4546}{7} = 649.428$$

Statistics Ex 32.1 Q1(ii)

Clearly, the middle observations are 46 and 48. So, median = 47

| |
|----|
| 34 |
| 38 |
| 42 |
| 44 |
| 46 |
| 48 |
| 54 |
| 55 |
| 63 |
| 70 |

We have,

$$\sum |x_i - 47| = \sum d_i = 86$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [86] = 8.6$$

Statistics Ex 32.1 Q1(iii)

Arranging the observations in ascending order of magnitude, we have

| |
|----|
| 30 |
| 34 |
| 38 |
| 40 |
| 42 |
| 44 |
| 50 |
| 51 |
| 60 |
| 66 |

Clearly, the middle observations are 42 and 44. So, median = 43

We have,

$$\sum |x_i - 43| = \sum d_i = 87$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [87] = 8.7$$

Statistics Ex 32.1 Q1(iv)

Arranging the observations in ascending order of magnitude, we have

| |
|----|
| 22 |
| 24 |
| 25 |
| 27 |
| 28 |
| 29 |
| 30 |
| 31 |
| 41 |
| 42 |

Clearly, the middle observations are 28 and 29 . So, median=28.5

Calculation of Mean Deviation

| X-values | Deviation from Median |
|----------|-----------------------|
| 22 | 6.5 |
| 24 | 4.5 |
| 30 | 1.5 |
| 27 | 1.5 |
| 29 | 0.5 |
| 31 | 2.5 |
| 25 | 3.5 |
| 28 | 0.5 |
| 41 | 12.5 |
| 42 | 13.5 |
| Total | 47 |

Clearly, the middle observation is . So, median=47.5

Calculation of Mean Deviation

| X-values | Deviation from Median |
|----------|-----------------------|
| 38 | 9.5 |
| 70 | 22.5 |
| 48 | 0.5 |
| 34 | 13.5 |
| 63 | 15.5 |
| 42 | 5.5 |
| 55 | 7.5 |
| 44 | 3.5 |
| 53 | 5.5 |
| 47 | 0.5 |
| Total | 84 |

We have,

$$\sum |x_i - 47.5| = \sum d_i = 84$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [84] = 8.4$$

Statistics Ex 32.1 Q2(i)

$$\text{Mean} = \frac{1}{n} \sum |x_i| = \frac{80}{8} = 10$$

Calculation of Mean Deviation

| X-values | Deviation From Mean |
|----------|---------------------|
| 4 | 6 |
| 7 | 3 |
| 8 | 2 |
| 9 | 1 |
| 10 | 0 |
| 12 | 2 |
| 13 | 3 |
| 17 | 7 |
| Total | 24 |

We have,

$$\sum |x_i - 10| = \sum d_i = 24$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{8} [24] = 3$$

Statistics Ex 32.1 Q2(ii)

$$\text{Mean} = \frac{1}{n} \sum |x_i| = \frac{168}{12} = 14$$

Calculation of Mean Deviation

| X-values | Deviation From Mean |
|----------|---------------------|
| 13 | 1 |
| 17 | 3 |
| 16 | 2 |
| 14 | 0 |
| 11 | 3 |
| 13 | 1 |
| 10 | 4 |
| 16 | 2 |
| 11 | 3 |
| 18 | 4 |
| 12 | 2 |
| 17 | 3 |
| Total | 28 |

We have,

$$\sum |x_i - 14| = \sum d_i = 28$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{12} [28] = 2.33$$

Statistics Ex 32.1 Q2(iii)

$$\text{Mean} = \frac{1}{n} \sum |x_i| = \frac{500}{10} = 50$$

Calculation of Mean Deviation

| X-values | Deviation From Mean |
|----------|---------------------|
| 38 | 12 |
| 70 | 20 |
| 48 | 2 |
| 40 | 10 |
| 42 | 8 |
| 55 | 5 |
| 63 | 13 |
| 46 | 4 |
| 54 | 4 |
| 44 | 6 |
| Total | 84 |

We have,

$$\sum |x_i - 50| = \sum d_i = 84$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [84] = 8.4$$

Statistics Ex 32.1 Q2(iv)

$$\text{Mean} = \frac{1}{n} \sum |x_i| = \frac{500}{10} = 50$$

Calculation of Mean Deviation

| X-values | Deviation From Mean |
|----------|---------------------|
| 38 | 12 |
| 70 | 20 |
| 48 | 2 |
| 40 | 10 |
| 42 | 8 |
| 55 | 5 |
| 63 | 13 |
| 46 | 4 |
| 54 | 4 |
| 44 | 6 |
| Total | 84 |

We have,

$$\sum |x_i - 50| = \sum d_i = 72$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [72] = 7.2$$

Statistics Ex 32.1 Q2(v)

First arrange the given numbers in ascending order

write these numbers in ascending order

57, 64, 43, 67, 49, 59, 44, 47, 61, 59

we get 43, 44, 47, 49, 57, 59, 59, 61, 64, 67

Let \bar{X} be the mean of given data, we get

$$\bar{X} = \frac{43+44+47+49+57+59+59+61+64+67}{10} = 55$$

Calculation of Mean Deviations from mean

| x_i | $ d_i = x_i - 55 $ |
|-------|----------------------|
| 43 | 12 |
| 44 | 11 |
| 47 | 8 |
| 49 | 6 |
| 57 | 2 |
| 59 | 4 |
| 59 | 4 |
| 61 | 6 |
| 64 | 9 |
| 67 | 12 |
| Total | 74 |

$$\text{M.D} = \frac{\sum d_i}{n} = \frac{74}{10} = 7.4$$

Statistics Ex 32.1 Q3

Arrange the given data for income group I in ascending order, middle observation is 4400.

So, median = 4400.

Mean deviation for group I

| x_i | $ d_i = x_i - 4400 $ |
|-------|------------------------|
| 4000 | 400 |
| 4200 | 200 |
| 4400 | 0 |
| 4600 | 200 |
| 4800 | 400 |
| Total | $\sum d_i = 1000$ |

$$\text{M.D.} = \frac{1}{n} \sum |d_i| = \frac{1000}{5} = 200$$

Arrange the given data for income group II in ascending order, middle observation is 4400.
So, median = 4400.

Mean deviation for group II

| x_i | $ d_i = x_i - 4400 $ |
|-------|------------------------|
| 3800 | 600 |
| 4000 | 400 |
| 4200 | 200 |
| 4400 | 0 |
| 4600 | 200 |
| 4800 | 400 |
| 5800 | 1400 |
| Total | $\sum d_i = 3200$ |

$$\text{M.D.} = \frac{1}{n} \sum |d_i| = \frac{3200}{7} = 457.14$$

Note: Answer given in the book is incorrect.

Statistics Ex 32.1 Q4

First arrange the given numbers in ascending order

write these numbers in ascending order

40.0, 52.3, 55.2, 72.9, 52.8, 79.0, 32.5, 15.2, 27.9, 30.2

we get 15.2, 27.9, 30.2, 32.5, 40.0, 52.3, 52.8, 55.2, 72.9, 79.0

$$\text{Clearly, Median} = \frac{40.0+52.3}{2} = 46.15$$

Let \bar{X} be the mean of given data, we get

$$\bar{X} = \frac{15.2+27.9+30.2+32.5+40.0+52.3+52.8+55.2+72.9+79.0}{10} = 45.8$$

Calculation of Mean Deviations from mean and median

| x_i | $ d_i = x_i - 46.15 $ | $ d_i = x_i - 45.8 $ |
|-------|-------------------------|------------------------|
| 40.0 | 6.15 | 5.8 |
| 52.3 | 6.15 | 6.5 |
| 55.2 | 9.05 | 9.4 |
| 72.9 | 26.75 | 27.1 |
| 52.8 | 6.65 | 7 |
| 79.0 | 32.85 | 33.2 |
| 32.5 | 13.65 | 13.3 |
| 15.2 | 30.95 | 30.6 |
| 27.9 | 19.25 | 17.9 |
| 30.2 | 15.95 | 15.6 |
| Total | 167.4 | 166.4 |

$$(i) \text{ M.D} = \frac{\sum d_i}{n} = \frac{167.4}{10} = 16.74$$

$$(ii) \text{ M.D} = \frac{\sum d_i}{n} = \frac{166.4}{10} = 16.64$$

Statistics Ex 32.1 Q5(i)

$$\text{Mean} = \frac{1}{n} \sum |x_i| = \frac{455}{10} = 45.5$$

| X-values | Deviation From Mean |
|--------------|---------------------|
| 34 | 11.5 |
| 66 | 20.5 |
| 30 | 15.5 |
| 38 | 7.5 |
| 44 | 1.5 |
| 50 | 4.5 |
| 40 | 5.5 |
| 60 | 14.5 |
| 42 | 3.5 |
| 51 | 5.5 |
| Total | 90 |

We have,

$$\sum |x_i - 45.5| = \sum d_i = 90$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [90] = 9$$

Now,

$$\bar{X} - \text{M.D} = 45.5 - 9 = 36.5$$

$$\bar{X} + \text{M.D} = 45.5 + 9 = 54.5$$

\therefore 6 observations lie between $\bar{X} - \text{M.D}$ and $\bar{X} + \text{M.D}$.

Statistics Ex 32.1 Q5(ii)

$$\text{Mean} = \frac{1}{n} \sum |x_i| = \frac{299}{10} = 29.9$$

| X-values | Deviation From Mean |
|--------------|---------------------|
| 22 | 7.9 |
| 24 | 5.9 |
| 30 | 0.1 |
| 27 | 2.9 |
| 29 | 0.9 |
| 31 | 1.1 |
| 25 | 4.9 |
| 28 | 1.9 |
| 41 | 11.1 |
| 42 | 12.1 |
| Total | 48.8 |

We have,

$$\sum |x_i - 29.9| = \sum d_i = 48.8$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [48.8] = 4.88$$

Now,

$$\bar{X} - \text{M.D} = 29.9 - 4.88 = 25.02$$

$$\bar{X} + \text{M.D} = 29.9 + 4.88 = 34.78$$

\therefore 5 observations lie between $\bar{X} - \text{M.D}$ and $\bar{X} + \text{M.D}$.

Statistics Ex 32.1 Q5(iii)

$$\text{Mean} = \frac{1}{n} \sum |x_i| = \frac{494}{10} = 49.4$$

| | |
|----|-------------|
| 38 | 11.4 |
| 70 | 20.6 |
| 48 | 1.4 |
| 34 | 15.4 |
| 63 | 13.6 |
| 42 | 7.4 |
| 55 | 5.6 |
| 44 | 5.4 |
| 53 | 3.6 |
| 47 | 2.4 |
| | 86.8 |

We have,

$$\sum |x_i - 49.4| = \sum d_i = 86.8$$

$$\therefore \text{M.D} = \frac{1}{n} \sum |d_i| = \frac{1}{10} [86.8] = 8.68$$

Now,

$$\bar{X} - \text{M.D} = 49.4 - 8.68 = 40.72$$

$$\bar{X} + \text{M.D} = 49.4 + 8.68 = 58.08$$

\therefore 6 observations lie between $\bar{X} - \text{M.D}$ and $\bar{X} + \text{M.D}$.

Statistics Ex 32.1 Q6

$$\sigma = \sqrt{\frac{1}{n} \sum (x_i - \bar{x})^2}$$

$$\sigma^2 = \sqrt{\frac{1}{n} \sum x_i^2 - \bar{x}^2}$$

$$(x_i - \bar{x})^2 = x_i^2 + \bar{x}^2 - 2x_i \bar{x}$$

$$\sum 2x_i \bar{x} = 2\bar{x} \sum x_i = 2n\bar{x}^2$$

$$\frac{1}{n} \sum (x_i - \bar{x})^2 = \frac{\sum (x_i^2 + \bar{x}^2 - 2x_i \bar{x})}{n}$$

$$= \frac{\sum x_i^2 + \sum \bar{x}^2 - \sum 2x_i \bar{x}}{n}$$

$$= \frac{1}{n} \sum x_i^2 + \frac{n\bar{x}^2 - 2n\bar{x}^2}{n}$$

$$= \frac{1}{n} \sum x_i^2 - \bar{x}^2$$
