Exercise:2.1

Page Number:2.8

Question 1.

Solution :

(i) $\left(\frac{a}{3}+1, b-\frac{2}{3}\right) = \left(\frac{5}{3}, \frac{1}{3}\right)$

By the definition of equality of ordered pairs, we have:

$$\left(\frac{a}{3}+1,b-\frac{2}{3}\right) = \left(\frac{5}{3},\frac{1}{3}\right)$$

$$\Rightarrow \left(\frac{a}{3}+1\right) = \frac{5}{3} and \left(b-\frac{2}{3}\right) = \frac{1}{3}$$

$$\Rightarrow \frac{a}{3} = \frac{5}{3}-1 and b = \frac{1}{3}+\frac{2}{3}$$

$$\Rightarrow \frac{a}{3} = \frac{2}{3} and b = 1$$

(ii) $(x + 1, 1) = (3, y - 2)$
By the definition of equality of ordered pairs, we have:
 $(x+1)=3 and 1=(y-2) \Rightarrow x=2 and y=3$
Question 2.

Solution :

The ordered pairs (x, -1) and (5, y) belong to the set $\{(a, b) : b = 2a - 3\}$. Thus, we have: x = a and -1 = b such that b = 2a - 3. $\therefore -1 = 2x - 3$ or, 2x = 3 - 1 = 2or, x = 1Also, 5 = a and y = b such that b = 2a - 3. $\therefore y = 2(5) - 3$ or, y = 10 - 3 = 7Thus, we get: x = 1 and y = 7Question 3

Solution : Given: $a \in [-1, 2, 3, 4, 5]$ and $b \in [0, 3, 6]$ We know: -1 + 6 = 5, 2 + 3 = 5 and 5 + 0 = 5Thus, possible ordered pairs (a, b) are $\{(-1, 6), (2, 3), (5, 0)\}$ such that a + b = 5. **Question 4.**

Solution :

Given: $a \in [2, 4, 6, 9]$ and $b \in [4, 6, 18, 27]$ Here. 2 divides 4, 6 and 18 and 2 is less than all of them. 6 divides 18 and 6 and 6 is less than 18. 9 divides 18 and 27 and 9 is less than 18 and 27. Now. Set of all ordered pairs (a, b) such that a divides b and $a < b = \{(2, 4), (2, 6), (2, 18), (6, 18), (9, 18),$ 18), (9, 27)

Ouestion 5.

Solution :

Given:

 $A = \{1, 2\}$ and $B = \{1, 3\}$ Now.

 $A \times B = \{(1, 1), (1, 3), (2, 1), (2, 3)\}$

 $B \times A = \{(1, 1), (1, 2), (3, 1), (3, 2)\}$

Question 6.

Solution :

Given:

 $A = \{1, 2, 3\}$ and $B = \{3, 4\}$

Now.

 $A \times B = \{(1, 3), (1, 4), (2, 3), (2, 4), (3, 3), (3, 4)\}$

To represent $A \times B$ graphically, follow the given steps:

(a) Draw two mutually perpendicular lines—one horizontal and one vertical.

(b) On the horizontal line, represent the elements of set A; and on the vertical line, represent the elements of set B.

(c) Draw vertical dotted lines through points representing elements of set A on the horizontal line and horizontal lines through points representing elements of set B on the vertical line. The points of intersection of these lines will represent $A \times B$ graphically.

Ouestion 7. Solution :

Given : $A = \{1, 2, 3\}$ and $B = \{2, 4\}$ $B \times A = \{(2, 1), (2, 2), (2, 3), (4, 1), (4, 2), (3, 3)\}$ $A \times A = \{(1, 1), (1, 2), (1, 3), (2, 1), (2, 2), (2, 3), (3, 1), (3, 2), (3, 3)\}$ $B \times B = \{(2, 2), (2, 4), (4, 2), (4, 4)\}$ We observe: $(A \times B) \cap (B \times A) = \{(2, 2)\}$ Question 8. Solution : n(A) = 5 and n(B) = 4Thus, we have: $n(A \times B) = 5$ Now,

 $n(A \times B) = 5(4) = 20$ A and B are two sets having 3 elements in common. Now, Let: A = (a, a, a, b, c) and B = (a, a, a, d)Thus, we have: $(A \times B) = \{(a, a), (a, a), (a, a), (a, d), (a, a), (a, a), (a, a), (a, d), (a, a), (a, a), (a, a), (a, d), (b, a), (a, a), ($ (b, a), (b, a), (b, d), (c, a), (c, a), (c, a), (c, d) $(B \times A) = \{(a, a), (a, a), (a, a), (a, b), (a, c), (a, a), (a, a), (a, a), (a, b), (a, c), (a, a), ($ (a, b), (a, c), (d, a), (d, a), (d, a), (d, b), (d, c) $[(A \times B) \cap (B \times A)] = \{(a, a), (a, a)\}$ \therefore n[(A × B) \cap (B × A)] = 9 **Question 9.**

Case (i): Let: A = (a, b, c)B = (e, f)Now, we have: $A \times B = \{(a, e\}), (a, f), (b, e), (b, f), (c, e), (c, f)\}$ $B \times A = \{(e, a), (e, b), (e, c), (f, a), (f, b), (f, c)\}$ Thus, they have no elements in common. Case (ii): Let: A = (a, b, c)B = (a, f)Thus, we have: $A \times B = \{(a, a\}), (a, f), (b, a), (b, f), (c, a), (c, f)\}$ $B \times A = \{(a, a), (a, b), (a, c), (f, a), (f, b), (f, c)\}$ Here, $A \times B$ and $B \times A$ have two elements in common. Thus, $A \times B$ and $B \times A$ will have elements in common iff sets A and B have elements in common.

Question 10.

Solution :

A is the set of all first entries in ordered pairs in $A \times B$ and B is the set of all second entries in ordered pairs in $A \times B$.

Also, n(A) = 3 and n(B) = 2 \therefore A = {x, y, z} and B = {1, 2}

Question 11.

```
textbooks, the
Solution :
Given:
A = \{1, 2, 3, 4\}
R = \{(a, b) : a \in A, b \in A, a \text{ divides } b\}
We know:
 1 divides 1, 2, 3 and 4.
2 divides 2 and 4.
3 divides 3.
4 divides 4.
\therefore \mathbf{R} = \{(1, 1), (1, 2), (1, 3), (1, 4), (2, 2), (2, 4), (3, 3), (4, 4)\}
Ouestion 12.
Solution :
Given:
A = \{-1, 1\}
Thus, we have:
A \times A = \{(-1, -1), (-1, 1), (1, -1), (1, 1)\}
And,
A \times A \times A = \{(-1, -1, -1), (-1, -1, 1), (-1, 1, -1), (-1, 1, 1), (1, -1, -1), (1, -1, 1), (1, 1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-1, -1), (-
(1, 1, 1)
Question 13.
```

Solution :

(i) False Correct statement: If $P = \{m, n\}$ and $Q = \{n, m\}$, then $P \times Q = \{(m, n), (m, m), (n, n), (n, m)\}$. (ii) False Correct statement: If A and B are non-empty sets, then $A \times B$ is a non-empty set of an ordered pair (x, y) such that $x \in A$ and $y \in B$. (iii) True $A = \{1, 2\}$ and $B = \{3, 4\}$ Now, $(B \cap \phi) = \phi$ The Cartesian product of any set and an empty set is an empty set. $\therefore A \times (B \cap \phi) = \phi$ Question 14.

Solution :

Given: $A = \{1, 2\}$ Now, $A \times A = \{(1, 1), (1, 2), (2, 1), (2, 2)\}$ $\therefore A \times A \times A = \{(1, 1, 1), (1, 1, 2), (1, 2, 1), (1, 2, 2), (2, 1, 1), (2, 1, 2), (2, 2, 1), (2, 2, 2)\}$ Question 15.

Solution :

Given: A = {1, 2, 4} and B = {1, 2, 3} (i) A × B = {(1, 1), (1, 2), (1, 3), (2, 1), (2, 2), (2, 3), (4, 1), (4, 2), (4, 3)} y y (1, 3) (2, 3) (4, 3) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 2) (2, 2) (1, 1) (2, 1) (2, 1) (3, 2), (3, 4)} (ii) B × A = {(1, 1), (1, 2), (1, 4), (2, 1), (2, 2), (2, 4), (3, 1), (3, 2), (3, 4)}
